

YOU NEVER KNOW WHAT MITE BE LURKING

**CLEARLEAF™ IS THE CLEAR CHOICE
TO PROTECT PLANTS & PROFITS**

Mites have been plaguing your operation for too long, drawing necessary nutrients from your plants and potential profits from your bottom line. You need a solution formulated with mite species variety and resistance in mind. ClearLeaf™ Insecticide/Miticide, with mite control and resistance management, offers greenhouse operations a unique tool to protect your plants and your profits.

CLEAR LEAF™
INSECTICIDE | MITICIDE

PRODUCT DETAILS

Three Active Ingredients

- Tau-fluvalinate
- Abamectin
- Piperonyl Butoxide

TWO MODES OF ACTION

(3A & 6) Plus a Synergist

- Broad-spectrum control
- Kills listed insects and mite species
- Piperonyl butoxide targets tough to control insects

APPLICATION SITES

- For commercial use for insect and mite control in greenhouses and lathe/shade houses.
- Applications to outdoor areas on and around field grown trees, ornamentals, foliage cuttings, bedding plants, flowers, and woody and herbaceous ornamentals.

APPLICATION DIRECTIONS

- This product may be applied using ground equipment sprayers, hand-held sprayers, power sprayers, foggers, or by ULV applicators.
- Kills and suppresses listed insect and mite pests when used at labeled rates.
- Works primarily through contact action, and good spray coverage is necessary.
- Treat when pests are immature or at a susceptible stage and populations are manageable before plant damage occurs.
- Can be used as part of a tank mix.

RESISTANCE MANAGEMENT

- Rotate the use of this product or other Group 3A or Group 6 insecticides/acaricides with different groups that control the same pests.
- Adopt an integrated pest management program for insecticide/acaricide use that includes, scouting, uses historical information related to pesticide use, record keeping, and which considers cultural, biological, and other chemical control practices.
